

## INTRACEUTICALS TOPICAL HYPERBARIC OXYGEN INFUSION OVERVIEW

**Intraceuticals Oxygen Infusions™** is a widely celebrated professional market skin care system available through top notch Plastic Surgeons, Dermatologists, Med Spas, Hotel and Resorts Spas and by private appointments primarily in the New York and Los Angeles areas. The immediate and lasting results have already been reported extensively in **HARPER'S BAZAAR, E! NEWS, ACCESS HOLLYWOOD** and **GOOD DAY LA**. "I love the treatment and so does my face." Madonna proclaimed in a recent interview. During her recent **CONFESSIONS TOUR Madonna** received a 30-minute treatment before every one of her high-voltage performances. Fans were delighted to witness their ivory-skinned icon appear onstage with a flawless youthful complexion despite the grueling demands of the show and a jet set travel schedule. **DESPERATE HOUSEWIVES** star **Eva Langoria** is the newest addition to a fast-growing list of the most beautiful women in the world who are determined to stay that way.

Intraceuticals Oxygen Infusions™ has emerged as the premiere therapeutic grade oxygen system (Topical Hyperbaric Oxygen Technology) in the world of professional skincare. Most often mistaken as just "The Oxygen Facial" the system incorporates cutting edge science and technology with extensive research. The system delivers serums composed of antioxidants, amino peptides and nano-hydraters to the skin through oxygen to moisturize, and super hydrate the skin immediately – leaving skin looking and feeling younger with a firming visible lift! The treatment is relaxing, soothing and suitable for all skin types. The benefits are extensive and the system of treatment is also widely used to support cosmetic laser and surgical procedures and visibly improves the appearance of several common skin conditions such as acne, rosacea, prematurely aging and severely dry skin.

The Intraceuticals Oxygen Infusion is the only treatment in the world that works with topical Hyperbaric Pressure, allowing oxygen and serum to be delivered to the epidermis reaching fundamental layers and assisting tissue with its natural process of rejuvenation from the inside out. The hydrating serums stimulate an osmotic response ensuring the results will continue to improve over the twenty-four hours following treatment.

The hydrating serum was developed after years of extensive research at leading universities in Australia. The serum is known as **Rejuvenation Infusion Serum** and when combined with Intraceuticals Topical Hyperbaric Oxygen technology regenerates new cells, elastin and collagen. The rejuvenation Infusion Serum's base is low molecular weight hyaluronic acid – an ingredient found naturally in the skin and known for its superior benefits and ingredients, and also includes vitamins A, C, and E, Green Tea and other powerful antioxidants.
